INTRODUCTION.

THE LIVERPOOL BOTANIC GARDEN was established, by a public subscription, in the year 1800, and opened in 1803. About ten statute acres of land were purchased, at a convenient distance from the town; and rather more than one half of them have been appropriated to the garden. Two lodges have been built for the residence of the Curator, a Committee room, and other purposes; and the whole is inclosed with a substantial stone wall. The remaining land is sold; and such has been the rapid, and perhaps unprecedented advance in the value of property in the vicinity of Liverpool, that the sale of the half has nearly repaid the purchase of the whole. The land is held by a renewable lease, under the Corporation of Liverpool; who, with the same distinguished liberality and generosity, with which they have encouraged any proposal for the improvement and ornament of the

Digitized by Google

town, have made a free grant to the Proprietors, of the reversionary interest of the Garden and buildings, "SO LONG AS THE SAME SHALL REMAIN APPROPRIATED TO THE PURPOSES OF THE PRESENT INSTITUTION." The disposition of the Garden was suggested by WILLIAM ROSCOE, Esq.; to whose zeal and active exertion in the dissemination of science, the encouragement of the fine arts, the general improvement of the mind, and the cultivation of those talents, which give dignity to character, and happiness to life, this institution owes its existence. The outline and general arrangement of the Garden may be seen in the annexed plan of the premises. The large conservatory (*vide* title-page) is an elegant and spacious range of buildings, 240 feet long, and in the centre 24 feet high; it is divided into five distinct compartments, heated to different degrees of temperature, adapted to the preservation of plants from every part of the world. There is also a small conservatory, with bark pits, and an aquarium, of dimensions sufficient to contain, at least, one specimen of every rare and tender aquatic; and a large compartment, with small frames, and wooden covers, hath lately been appropriated for the preservation of such herbaceous plants as are too tender to endure the severity of our winter. When

Digitized by Google

the funds of the institution shall be adequate to the expense, it is intended to add a library of works of Natural History, with an apartment for the preservation of collections of specimens of dried plants; of which the Proprietors are already in the possession of about 3000, collected by the late Dr. FORSTER in his voyages to the South Seas, with large and valuable contributions from his friends and correspondents.

The situation of the Garden is peculiarly favourable, being so near to a large sea-port town, from which the communication is direct and frequent to the most remote parts of the earth. And the Merchants and Masters of vessels are entitled to the thanks of the Proprietors, for their numerous and valuable presents of plants and seeds to the Botanic Garden. They wish also gratefully to acknowledge their obligations to the several proprietors of private collections; to some of the most eminent cultivators of plants for sale; to many Gentlemen who have favoured them with the most rare indigenous plants of Great Britain discovered in their botanical excursions; to the Universities of Oxford, Cambridge, and Dublin; and to the Superintendant of the Royal Botanical Gardens at Kew, for their several valuable additions to the present collection.

Digitized by Google

To the perseverance, assiduity, and zeal of the Curator, Mr. JOHN SHEPHERD, the Proprietors owe the greatest and the most valuable part of their plants; to whose knowledge, accuracy, and industry in the discharge of the several duties of his office, the garden affords the most ample testimony; and they are happy in paying this public tribute so justly due to his meritorious services.

It has been thought expedient to print this Catalogue of all the trees, shrubs, and plants, now growing in the Botanic Garden; and it is hoped that those friends, who have, by their liberal contributions from time to time, enriched this collection, will be gratified by the progress which has been made; and, by seeing what the garden contains, may discover in what it is deficient. A continuance of their assistance is requested, with greater confidence, under a clear conviction that the Proprietors will be more happy to give than to receive.

In this Catalogue, the plants are arranged under four general and popular divisions,—I. Trees and Shrubs, marked A,—II. Herbaceous Plants, H,—III. Greenhouse Plants, G,—IV. Stove Plants, S.—In the ornamental part of the garden, where the plants grow promiscuously, a legible large label is affixed to every plant, with the initial letter of the

Digitized by Google

general division to which it belongs, and a number corresponding with the number in the Catalogue under the same division, where, in the same line, will be found the Latin and English name of the plant, with its class, order, &c.—With this Catalogue as a manual, a visitor, without the trouble of inquiry, may discover the name and family of any plant in the Garden.

In the first establishment of this institution, the number of shares was limited to 300; it was afterwards extended to 375; but the funds proving inadequate to the necessary expenditure of the Garden, and a very considerable debt having been contracted by the expense of building the conservatories; upon the report of the Committee at the general meeting of the Proprietors, in May, 1807, they unanimously resolved further to increase the number of shares to 450, by a subscription of the Proprietors only; which subscription was filled up in a very few days. And it is now confidently hoped, that by a liquidation of debt, and a great increase of annual income, the plans which have been suggested for the improvement of the Garden, will be fully completed, and the permanency of the institution effectually secured.

LIVERPOOL, June 15, 1808.
